

Changes After Reverse Engineer

01. After reverse engineer go to ApplicationDbContext and set

```
public partial class ApplicationDbContext : DbContext
to
public partial class ApplicationDbContext : IdentityDbContext<ApplicationUser>
```

02. Comment all these default roles

```
public virtual DbSet<AspNetRoleClaims> AspNetRoleClaims { get; set; }
public virtual DbSet<AspNetRoles> AspNetRoles { get; set; }
public virtual DbSet<AspNetUserClaims> AspNetUserClaims { get; set; }
public virtual DbSet<AspNetUserLogins> AspNetUserLogins { get; set; }
public virtual DbSet<AspNetUserTokens> AspNetUserTokens { get; set; }
public virtual DbSet<AspNetUsers> AspNetUsers { get; set; }
```

03. And add these

```
public virtual DbSet<ApplicationUser> ApplicationUsers { get; set; }
public virtual DbSet<ApplicationRole> ApplicationRoles { get; set; }
```

04. Go to thess table

01.
public virtual DbSet<Employees> Employees { get; set; }
And change this
public virtual ICollection<AspNetUsers> AspNetUsers { get; set; } = new List<AspNetUsers>();
to this
public virtual ICollection<ApplicationUser> AspNetUsers { get; set; } = new
List<ApplicationUser>();

02.
public virtual DbSet<RoleModulePermissions> RoleModulePermissions { get; set; }
And change this
public virtual AspNetRoles Role { get; set; }
to this
public virtual ApplicationRole Role { get; set; }

03.
public virtual DbSet<UserSessions> UserSessions { get; set; }
And change this
public virtual AspNetUsers User { get; set; }
to this
public virtual ApplicationUser User { get; set; }

05. Add this

01.
base.OnModelCreating(modelBuilder);
in this
protected override void OnModelCreating(ModelBuilder modelBuilder)

05. Comment all the default roles in OnModelCreating and add these

```
modelBuilder.Entity<ApplicationUser>()
    .HasDiscriminator<string>("Discriminator")
    .HasValue<ApplicationUser>("ApplicationUser");

modelBuilder.Entity<ApplicationUser>()
    .HasOne(u => u.Employee)
    .WithMany(e => e.AspNetUsers)
    .HasForeignKey(u => u.EmployeeId)
    .HasConstraintName("FK_AspNetUsers_Employees_EmployeeID");

modelBuilder.Entity<ApplicationUser>()
    .HasOne(us => us.UserSession)
    .WithOne(u => u.User)
    .HasForeignKey<UserSessions>(us => us.UserId)
    .HasConstraintName("FK_UserSessions_AspNetUsers_UserId");
```
